

### CALL FOR PAPERS

#### Working and managing with emerging technologies

With the rapid development of the emerging technologies, the 25th conference the AIM invites the community of researchers in information systems to examine their transformative and performative effects. Echoing the theme put forward by the European Conference of Information Systems, this call aims to question the principles of Freedom, Equality and Fraternity in a digital world, in particular by studying how emerging technologies can act on professional, managerial, political and social realities.

- Digitalization of the supply chain
- Digital transition in developing countries
- Digital meta-research
- General subjects
- Emerging technologies: managerial and social issues?
- Transformation and organization
- The work and the digital
- SIG AIM – Digital Business Model
- SIG AIM – Industries of the future
- SIG AIM – Information Systems Security
- SIG AIM – pedagogical transformations
- SIG AIM –digital transformation of health systems
- SIG AIM – IT use
